Astronomy and astro-physics Volume 12

By Carleton College. Observatory

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 378 pages. Dimensions: 9.7in. x 7.4in. x 0.8in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1893 Excerpt: . . . three times the diameter. Saturns ring is ten thousand miles in breadth. Its thickness is unknown, but it has been variously estimated at from forty to one hundred and forty miles. As any satellite composed of particles free to move among themselves revolves about its primary, there will be a tendenc to form tides within it elongating the satellites in the direction of the radius vector. Owing to the rotation of the satellite, the elongation will really make a certain angle with this line. The attraction of the primary acting upon these protuberant regions tends to give the satellite a rotation, the same in direction and period as that of its revolution in its orbit. But a satellite revolving in a retrograde direction is under these circumstances in a position of unstable equilibrium, and the slightest disturbance of its plane of rotation will cause it under...
